

ENCRYPTION AND PROTECTING YOUR CORPORATE INFORMATION

As a responsible organisation, and to comply with impending regulations, you are probably reviewing your IT infrastructure with regards to encrypting your data. **DISUK Ltd** specialises in media encryption. With 12 years in tape encryption we are the UK number 1.

Recent breaches of data protection include:

- **HMRC loses 25 million individuals details**
- **Ministry of Defence lost the personal details of 600,000 people**
- **Details of three million learner drivers have been lost by the Government**
- **A LAPTOP containing the medical records of more than 5,000 patients has been stolen from a hospital**
- **"Presumed lost": 1m Bank of America customer records en-route to Backup centre**

With the media spotlight blazing, this is a grave concern for anyone who stores data of any kind. And as an IT professional entrusted with the responsibility of securing your corporate data you will have implemented firewalls, VPN, intrusion detection, security policies, antivirus software, spy-ware and mal-ware detectors to offer concentric layers of protection to the information stored by your business.

As best practice in case of a disaster, your backup tapes are sent off-site using a courier. That backup tape has every single piece of information about your business, your customers, employees, suppliers, intellectual property, procurement details, processes, procedures, accounts, bank accounts, cash flow, employees bank accounts, employees names, addresses, next of kin, marketing campaigns; ***your whole business in clear text on a backup tape!!***

You have to keep certain records for a number of years to comply with the multitude of regulations? Do you now have an archive of tapes, sitting off-site in an archive somewhere? Unencrypted? Written in plain, clear text?

At DISUK we have over 100 years experience in IT, infrastructure, encryption, operations, development – we've done the majority of every area of IT and business in every business sector. We understand the potential impact of changes to your IT infrastructure which is why we develop our solutions to make your life as simple as possible, and change seamless.
